

WEB3, assignment 6

Conversion to SSR

In this assignment you are supposed to convert a project to SSR using Next.js

Requirements

Must have

- The implementation must have the features from assignment 5
- The implementation must use Next.js for server-side rendering.
- The implementation must work both when using "npm run dev" and "npm run build; npm run start"

Should have

- The implementation should use both server and client components
- The design should make deliberate choices of when to use static vs dynamic pages

Could have

- The implementation could have its API implemented in Next.js

Advice

- Create the template with npx create-next-app@latest
- Follow the advice from the slides

The hand-in

- Groups: 2-4 people. Groups can be a mix of members from X and Y class, but remember to write it in the hand-in.
- Hand-in a zip file with the project.
